

Disability-Inclusive Primary Health Care

Sector-specific online Training

Three half days of training:

- 14 December (afternoon)
- 15 & 16 December (morning, Central European Time, CET)

- Virtual via Zoom
- In English
- Reasonable accommodation upon request
- Free of charge

The training primarily targets HQ programme and project staff of German NGOs working in the health sector.

Background

The disruption of essential health services during humanitarian crisis worsens the situation of those who might already be excluded from access to health care, such as persons with disabilities. Misperceptions about the capacity and requirements of persons with disabilities, hinder their access to health care services and information. This can increase for example the risk of infection, as shown in the COVID-19 pandemic.

Therefore, the training will answer the following questions:

- How is disability understood?
- How does the absence, disruption or lack of access to health care services impact women, men, girls and boys with disabilities?
- What are key actions along the project cycle to deliver quality health care services that are inclusive of persons with disabilities?
- What are key practical recommendations and promising practices?

Methodology

The training will include a mix of input presentations, group and scenario working sessions, plenary discussions, open knowledge and experience exchanges. Following the workshop, participants receive certificates, recordings and training materials.

Application

Each organisation selects 1-2 staff members who apply through the application form. Successful applicants are selected based on pre-defined criteria and will be informed after the application deadline.

Application is open: 9 November - 23 November (6pm CET) here.
